### EXAMINER'S AMENDMENT

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with David Cochran, Registration No. 39,142, on 9/28/07.

The application has been amended as follows:

1. The last paragraph of Claim **29** reads, " **if** the presence server ....".

The phrase is now changed to -- **when** the presence server .... --.

2. Claims 39-44 (Canceled).

[End of Examiner Amendment]

*Allowable Subject Matter*

1. Claims 29-38 are allowed.
2. The following is the examiner's statement of reasons for allowance.
3. Claim 29 discloses a method of instant messaging between a plurality of messaging clients configured to transmit instant messages and presence data between each other, the presence data including a first known state in which a messaging client is receptive to communicating with other messaging clients, comprising:
  4. receiving communications including presence data from each of the messaging clients at a presence server, the presence server determining the present state of the messaging clients using the presence data and storing information in a state table entry for each of the messaging clients indicating the present state of the messaging client;
  5. for each of the messaging clients that is in the first known state, the presence server periodically transmitting to each of the messaging clients present state data regarding the other messaging clients stored in the state table entries;
  6. when the presence server does not receive any communications from a messaging client during a predetermined period of time, then modifying the state table entry for the non-communicative messaging client to be an unknown state indicating that the presence server cannot determine the present state of the messaging client, and thereafter inhibiting further periodic transmissions of the present state data regarding the other messaging clients until the presence server observes the state of the messaging client by receiving presence data from the messaging client, without transmitting any presence information requests from the presence

server to the messaging client, indicating that the messaging client has returned to the first known state

Independent **claims 29** is allowed because of the reasons from page 10 of the Remarks filed on 9/18/07 and that the cited prior arts fail to teach or suggest the above underlined limitations in combination with the remaining limitations.

Claims 30-38 are allowed for being dependent on the allowable independent claim 29.
